

Project Design Phase-II
Solution Requirements (Functional & Non-functional)

Date	15 October 2022
Team ID	PNT2022TMID44328
Project Name	Project - Machine Learning-Based Predictive Analytics for Aircraft Engine.
Maximum Marks	4 Marks

Functional Requirements:

FR No.	Non-Functional Requirement	Description
NFR-1	Usability	Usability is a non-functional requirement, because in its essence it doesn't specify parts of the system functionality, only how that functionality is to be perceived by the user, for instance how easy it must be to learn and how efficient it must be for carrying out user tasks.

NFR-2	Security	<p>Functional security requirements describe functional behavior that enforces security.</p> <p>Functional requirements can be directly tested and observed.</p> <p>Requirements related to access control, data</p>
-------	-----------------	--

Following are the functional requirements of the proposed solution.

FR No.	Functional Requirement (Epic)	Sub Requirement (Story / Sub-Task)
FR-1	User Registration	<p>Registration through Form</p> <p>Registration through Gmail</p> <p>Registration through LinkedIN</p>
FR-2	User Confirmation	<p>Confirmation via Email</p> <p>Confirmation via OTP</p>
FR-3	User Password	<p>Set Password</p> <p>Confirm Password</p>
FR-4	User Verification	Email Verification
FR-5	User Dataset	Add to Prediction System

Non-functional Requirements:

Following are the non-functional requirements of the proposed solution.

		<p>integrity, authentication, and wrong password lockouts fall under functional requirements.</p>
NFR-3	Reliability	<p>Reliability requirements are typically part of a technical specifications document. They can be requirements that a company sets for its product and its own engineers or what it reports as its reliability to its customers. They can also be requirements set for suppliers or subcontractors.</p>

NFR-4	Performance	Performance requirements define how well the software system accomplishes certain functions under specific conditions. Examples include the software's speed of response, throughput, execution time and storage capacity. The service levels comprising performance requirements are often based on supporting end-user tasks.
NFR-5	Availability	Availability describes how likely the system is accessible to a user at a given point in time. While it can be expressed as an expected percentage of successful requests, you may also define it as a percentage of time the system is accessible for operation during some time period.
NFR-6	Scalability	Non-functional Requirements capture conditions that do not directly relate to the behavior or functionality of the solution, but rather describe environmental conditions under which the solution must remain effective or qualities that the systems must have. They are also known as quality or supplementary requirements.
